CivicFix — Lean Canvas

Smart Civic Issue Reporting and Management System | SDG 11: Sustainable Cities and Communities

PROBLEM

• Civic issues can be hard to report consistently and follow through on.
• Residents may lack a clear view of status and next steps.
• Teams need a simple triage view for incoming reports.
Hypothesis: a clear workflow can reduce reporting friction.

SOLUTION

• Structured issue submission and validation.
• Search and filters over stored reports.
• Admin review with controlled status transitions.
• Transparent impact-based priority guidance and aggregate analytics.

UNIQUE VALUE PROPOSITION

A lightweight, understandable civic-reporting prototype that connects structured submissions, review workflow and explainable triage in one interface.

TARGET USERS

• Residents or community members in a hypothetical pilot.
• Staff/volunteers reviewing reports.
• Students and educators studying civic technology.
Not currently connected to official users or services.

CHANNELS

• Classroom demonstration and project presentation.
• Local stakeholder interviews in a future evaluation.
• A controlled pilot only after privacy, security and operational review.

KEY METRICS

Potential evaluation measures (not yet measured):
• Submission completion rate and time.
• Validation/error frequency.
• Status-update completion and stale-update rejection.
• Usability/accessibility findings.
• Duplicate-suggestion usefulness judged by reviewers.

COST STRUCTURE

Current prototype: developer time, local computer, Node.js/npm and open-source dependencies.
Potential pilot: hosting, maintenance, secure operations, support, accessibility testing, backups, and data governance.

SUSTAINABILITY & VIABILITY HYPOTHESES

• A small workflow may be feasible for a limited educational pilot.
• Value depends on clear ownership of report review and status updates.
• Long-term viability would require maintenance, moderation, privacy governance and funding/operational ownership.
These are hypotheses, not validated findings.

SDG 11 ALIGNMENT

Supports learning and experimentation related to inclusive, safe, resilient and sustainable communities (SDG 11). It is an educational contribution only; no measurable SDG outcome or real-world civic impact has been established.

Scope note: CivicFix is a local educational prototype using fictional seed reports and a local SQLite database. No adoption, accuracy, revenue, performance or impact statistics are claimed. The current runtime and browser behavior remain unverified because Express/Helmet HTTP integration tests could not run.
